Contents Introduction This guide will lead you through a basic timeline that will allow you to: Create a new document Create a basic shape in the canvas Apply an adjustment layer Change the hue, lightness and saturation of your image Simplify your image by reducing the number of layers Select the area you want to clone Go on to create a new image Although Photoshop also offers other image manipulation programs, many of Photoshop's features are specific. Photoshop can be used in either a standalone fashion or in conjunction with other programs. For beginners, Photoshop can be a great tool as you learn about the basic functions. Create a new document To create a new document, choose File > New Document. In the resulting screen, click OK, enter a new document name and click OK again. If you've done it right, Photoshop has created a new document with the default settings. You can also create a new document from within the Photoshop program by right-clicking on the canvas. If you have Photoshop Elements installed, you can create a new document using the Elements user interface. Save time by creating a template Your workday will be much easier when you save your creative work in the background. Photoshop contains a number of features that make it simple to create a number of different images. For example, you can create a new document with different settings each time you create a new image. You can create images that you might use in multiple places in your work, and keep only a single image in your computer's hard drive, instead of a "collection" of images. To save time, create a template that can be used for a number of different images. This will make it easy to add an image to a design without having to open a new document. For example, create a template called "Arts and Crafts" or "Postcards" or whatever you think will make it simple to add

your images to a design. To create a template, click on the New Document button in the bottom left of the Photoshop window, and select Create Template from the resulting menu. Name the template. As you can see from the image above, templates can be created in different sizes. If you'd like to create a template that fits inside the workspace, it may be worthwhile to resize the template to be the appropriate size for your space. If, however, you'd like your template to be

## Photoshop 2021 (Version 22.0.1)

Q: How to preserve the original size of scrollview's children? I have a scrollview containing many children on it. The parent view controller won't update the size of the scrollview. I try to set the size of the children manually, by adding this to the view controller that contains the scrollview and the children. -  
(void)viewDidLoadSubviews { [super viewDidLoadSubviews]; for (UIView \*child in scrollView.subviews) { [child setFrame:CGRectMake(0, 0, 100, 100)]; } } The children are not preserved. if I have a large scale value on the children, they still won't fit into the scrollview. any idea? A: When you create a UIScrollView, it automatically creates a new UIView and adds it as its child. This new UIView has no frame set and so it is allowed to grow in size as your content grows. If you want to control the size of the content inside the view, you need to programmatically create your content and then add it to the view and then add it to the scroll view, something like this (i'm not sure the syntax is correct, but you get the idea): // Create you content UIView \*contentView = [[UIView alloc] initWithFrame:CGRectMake(0,0,100,100)]; [self addChildView:contentView]; // Add it to the view's parent view UIView \*parentView = self.view; [parentView addSubview:contentView]; // Then add the content view to the scroll view \_scrollView.contentSize = CGSizeMake(contentView.frame.size.width,contentView.frame.size.height);  
Hope this helps, Tag Archives: Subcultures This episode opens with The Beat drop "Mardi Gras," as recorded by Richard Hell and his Voidoids in 1979. Then, we get to talking, as Diplo plays a set for listeners. [00:16] Lead singer of the rock band The Beat Lenny Skunked-
